15.   (Cancelled).

16.   (Cancelled).

17.   (Cancelled).

18.   (Cancelled).

19.   (Currently Amended) A method for an information owner to download software to an information device over a network, wherein said information device comprises a smart card, and said method comprises the steps of:

    a.   the information owner delegating, to a third party, download of said software from a server associated with said third party to the information device, wherein said information device is capable of downloading new instruction, update existing instructions, and overwriting existing instructions;

    b.   the information device computing an acknowledgment of said download of said software, wherein said acknowledgment includes a digital signature created via public key encryption;

    c.   the information device sending said computed acknowledgment available to the information owner via said network; and

    d.   the information owner verifying the computed acknowledgment.

30.   (Cancelled).

31.   (Cancelled).

32.   (Cancelled).

33.   (Cancelled).

34.   (Currently Amended) A system for allowing a smart card issuer to securely delegate to a

third party the download of an applet to a smart card over a network, said system comprising:

an external device associated with said third party and having said applet resident

thereon, said external device capable of transferring said applet to said smartcard,

wherein said applet is associated with said issuer and said applet is transferred by

said third party as delegated by said issuer, said information device capable of

Appl. No. 09/522,628

downloading new instructions, update existing instructions, and overwriting existing instructions;

said smart card including instructions configured to initiate a public-key acknowledgment process that produces a digital signature responsive to said transferred applet and a cryptographic key stored on said smart card, and send said digital signature to said issuer for validation by said issuer, wherein only said issuer can validate said acknowledgment.

35.   (Original) The system of claim 34, wherein said acknowledgment process utilizes a symmetrical DES algorithm based on said cryptographic key.

36.   (Original) The system of claim 35, wherein said DES algorithm is a triple-DES algorithm.

37.   (Cancelled).
